Information on Hungarian Mines

50X1-HUM

1. The State ore mines at Reesk (correct spelling Reesk) are located in the vicinity of Eger and Parad, and have been worked for approximately thirty years. Their operation, however, was never profitable.
2. The Nagytornai Mountain ridge, approximately 100 kilometers to the west of Reesk, is covered completely with virgin forest. No information has been obtained on the discovery of ore in this area. It is thought very unlikely that such a discovery would remain a secret, as the area is frequented, during summer and winter months, by hikers, skiers and tourists, and the discovery of ore would be generally known
